WEBSITE PROJECT PROPOSAL

ONALENNA JEWELS

1. Organisation Overview

Organisation Name: Onalenna Jewels

History:

Onalenna Jewels is a South African handcrafted jewellery business founded in 2020 from a passion for timeless beauty and genuine craftsmanship. The business began in a small studio in Johannesburg, where modern jewellery trends were combined with traditional African artistry and heritage techniques. The brand has developed into a jewellery house focused on unique designs, quality craftsmanship and meaningful jewellery. The website describes founder Onalenna Sebela as a master jeweller with international experience who returned to South Africa with the aim of creating world-class jewellery that celebrates African heritage.

Mission:

Onalenna Jewels aims to create exquisite handcrafted jewellery that celebrates beauty, elegance and individuality while maintaining quality craftsmanship and making luxury personal and accessible.

Vision:

The vision is to become one of Africa's trusted handcrafted jewellery brands, recognised for excellence, innovation, ethical practices, sustainable luxury and African identity.

Target Audience:

The target audience includes women, brides, professionals, jewellery enthusiasts and customers looking for personalised jewellery, engagement rings, everyday accessories and meaningful gifts.

2. Website Goals and Objectives

The main goal of the website is to provide Onalenna Jewels with an attractive online presence where customers can discover the brand, explore its jewellery collection, learn about its craftsmanship and submit enquiries for customised jewellery.

The website objectives are to:

- Increase awareness of the Onalenna Jewels brand.
- Present jewellery products with clear images, descriptions and prices.
- Communicate the organisation's history, mission, vision and values.
- Provide customers with a convenient custom jewellery enquiry process.
- Make it easier for customers to contact the Johannesburg and Cape Town studios.
- Promote the brand's handcrafted, ethical and African-inspired identity.
- Encourage visitors to explore the jewellery collection and make enquiries.

Key Performance Indicators (KPIs):

- Number of website visitors.
- Number of product page views.
- Number of custom jewellery enquiries submitted.
- Number of contact form submissions.
- Number of visitors who navigate from the Home page to the Collection or Enquiry page.
- Number of customer enquiries generated through the website.

3. Current Website Analysis

The current Onalenna Jewels website provides a clear five-page structure consisting of Home, About Us, Our Collection, Custom Enquiry and Contact. The navigation is consistent across the pages, allowing users to move between the main sections of the website.

A major strength is the amount of business information provided. The About page communicates the company's history, mission, vision, core values, founder background, handcrafted approach and sustainability practices. The Collection page presents four jewellery products with images and prices in South African Rands and includes a comparison table showing materials, prices and stock availability.

The enquiry page is also a strength because it allows customers to provide detailed requirements, including their preferred metal, type of jewellery, budget, quantity, required date and design description.

Areas for improvement include creating a more visually refined layout, improving consistency in spacing and page presentation, and providing a more polished user experience. The website can also be improved by replacing placeholder social media links and ensuring that the map used on the Contact page is an accurate interactive map rather than an illustrative image.

4. Proposed Website Features and Functionality

The proposed website will retain the existing five-page structure while improving its presentation and usability.

Home Page

The Home page will introduce Onalenna Jewels through a strong hero section containing the brand name, a short introduction, jewellery imagery and a call-to-action link to the collection. It will also communicate key benefits such as handcrafted production, ethically sourced gemstones and the repair warranty.

About Us Page

The About page will present the organisation's history, mission, vision, core values, founder information, handcrafted philosophy and sustainability commitments.

Our Collection Page

The Collection page will display jewellery products with images, product names, prices and product information. The existing collection includes a gold necklace, pearl earrings, diamond ring and silver bracelet. A comparison table will allow visitors to compare materials, prices and stock availability.

Custom Enquiry Page

The Custom Enquiry page will allow customers to request personalised jewellery. The form will collect their name, email address, phone number, required date, quantity, preferred metal, jewellery type, budget and design requirements.

Contact Page

The Contact page will provide the Johannesburg head office and Cape Town pop-up store information, opening hours, telephone numbers, WhatsApp contact, email address, contact form and location information.

5. Design Aesthetic and User Experience

The website will use a **soft pink, white and dark grey colour scheme with deeper pink accents**. This direction is already established throughout the current HTML pages and supports the feminine, elegant nature of the jewellery brand.

The design will use clear headings and readable body text so that customers can easily understand the information. Large jewellery images will be used to make the products visually appealing. The Home page will use a prominent product image and call to action, while the Collection page will use organised product information and comparison content.

User experience will focus on simple navigation, readable content, clear page headings, descriptive image alternative text, accessible forms and straightforward calls to action. The same navigation structure will be maintained across all pages to help users move around the website easily.

6. Low-Fidelity Wireframe Descriptions and Sitemap

The following low-fidelity wireframes describe the planned information hierarchy and layout before detailed styling is applied.

6.

Figure 6: Onalenna Jewels Website Sitemap

7. Technical Requirements

The website will be developed using **HTML5** for the structure and content of the pages. The current pages already use the HTML document structure, including the DOCTYPE, language declaration, metadata, headings, navigation, main content and footer. **CSS** will be used to improve the visual presentation, including colours, typography, spacing, layouts, product presentation and responsive design.

JavaScript can be used for client-side functionality and validation where required.

The project will require:

- HTML5
- CSS
- JavaScript
- Visual Studio Code or another suitable code editor
- Image assets
- Web hosting
- Domain name
- Web browser testing
- GitHub repository for version control

The website should be tested on different screen sizes and common web browsers. Images should contain meaningful alternative text. Forms should contain suitable labels and input controls.

8. Hosting and Domain Requirements

A suitable domain for the business would be:

www.onalennajewels.co.za

The website will require web hosting that supports standard HTML, CSS, JavaScript and image files. The final website can be deployed to a suitable web hosting service after development and testing.

9. Timeline and Milestones

Week	Activity	Deliverable
Week 1	Research Onalenna Jewels and gather content	Organisation research
Week 2	Finalise proposal and website structure	Proposal, sitemap and wireframes

Week	Activity	Deliverable
Week 3	Develop five HTML pages	Functional HTML website
Week 4	Test HTML pages and navigation	Corrected HTML website
Week 5	Develop CSS styling	Styled website
Week 6	Improve responsive layout	Mobile and desktop layouts
Week 7	Add JavaScript functionality and validation	Interactive website
Week 8	Final testing, SEO checks and corrections	Final website
Week 9	Prepare GitHub repository and documentation	Final submission

10. Budget

The following budget provides realistic estimated costs for developing and maintaining the website.

Item	Estimated Cost
Domain registration (.co.za)	R200 per year
Web hosting	R600 per year
Website development	R3,500 once-off
Website maintenance	R1,200 per year
Professional image and digital assets	R500
Testing and deployment	R500
Estimated First-Year Total	R6,500

The development cost covers the creation of the five-page website, while hosting and domain costs support the website after deployment. Maintenance would cover future content updates, minor corrections and basic website support.

11. Conclusion

The proposed Onalenna Jewels website will provide the business with a professional online platform that reflects its handcrafted jewellery identity and South African heritage. The existing website content provides a strong foundation through its organisation history, mission, vision, values, product collection, custom enquiry process and contact information.

The improved website will focus on presenting this information in a clear, attractive and user-friendly manner. Customers will be able to explore jewellery products, learn about the brand, request customised pieces and contact the business through dedicated website pages.

ONALENNA APPAREL CO.

1. Organisation Overview

Organisation Name: Onalenna Apparel Co.

History:

Onalenna Apparel Co. is a South African fashion and clothing brand focused on modern, stylish and accessible clothing for young adults. The business offers everyday fashion items such as tops, dresses, trousers, jackets and coordinated outfits. The brand aims to combine contemporary fashion with African-inspired creativity while providing customers with clothing suitable for casual, social and professional occasions.

Mission:

To provide stylish, comfortable and accessible clothing that allows customers to express their individuality and confidence.

Vision:

To become a recognised South African fashion brand known for contemporary designs, quality clothing and an authentic African-inspired identity.

Target Audience:

The target audience includes young adults, students, young professionals and fashion-conscious customers who are interested in affordable and fashionable clothing.

2. Website Goals and Objectives

The main goal of the website is to establish a strong online presence for Onalenna Apparel Co. and provide customers with an easy way to discover its clothing collections.

The objectives are to:

- Showcase clothing collections in an organised manner.
- Increase brand awareness and online visibility.
- Provide customers with product information, sizes and prices.
- Generate customer enquiries through the website.
- Make it easier for customers to contact the business.
- Encourage customers to explore different clothing collections.

Key Performance Indicators (KPIs):

- Number of website visitors.
- Number of product page views.
- Number of product enquiries.

- Number of contact form submissions.
- Number of visitors viewing individual clothing products.
- Customer engagement with the website.

3. Current Website Analysis

Onalenna Apparel Co. will be presented as a developing fashion business requiring a dedicated online platform. The proposed website will address the need for a central location where customers can view clothing collections, learn about the business and submit enquiries. A website will also provide a more organised alternative to relying only on social media or physical communication.

The main areas for improvement will be product presentation, accessibility of business information, customer enquiries and online brand visibility.

4. Proposed Website Features and Functionality

The website will contain five main pages: **Home, About Us, Collection, Enquiry and Contact.**

The **Home** page will introduce the brand through a hero section, featured clothing and clear calls to action. The **About Us** page will provide the company's history, mission, vision and brand values. The **Collection** page will display clothing items with images, descriptions, available sizes and prices. The **Enquiry** page will allow customers to ask about products, sizes, availability and orders. The **Contact** page will provide contact details, business hours, social media links and a contact form.

5. Design Aesthetic and User Experience

The website will use a modern fashion-focused design with a **black, white and neutral colour scheme with subtle accent colours**. Clear typography will be used for headings and readable fonts for body content. Large clothing images will be used to showcase products.

The layout will use clear navigation, organised product cards and visible calls to action. The user experience will focus on simple navigation, readable information, accessible forms and an easy process for finding clothing products and contacting the business.

6. Low-Fidelity Wireframes and Sitemap

Low-fidelity wireframes will be created for the five proposed pages:

1. Home

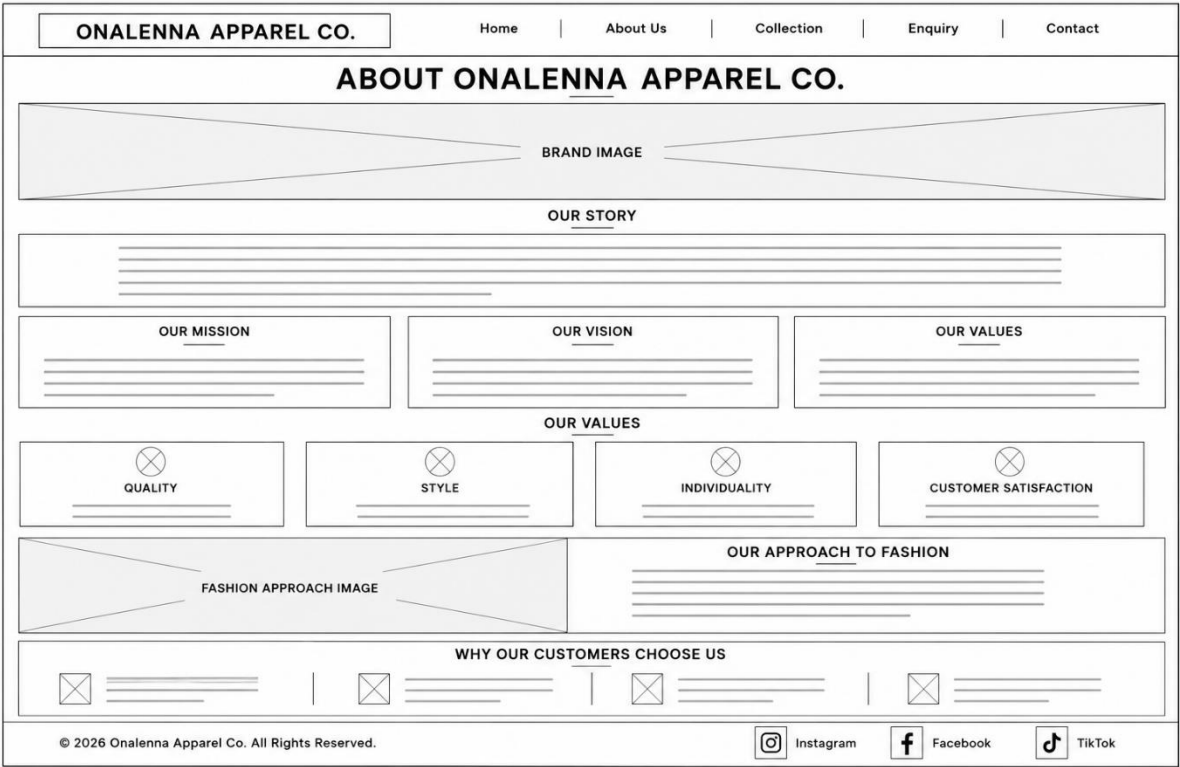

Figure 2: Low-Fidelity About Us Page Wireframe

2. About Us

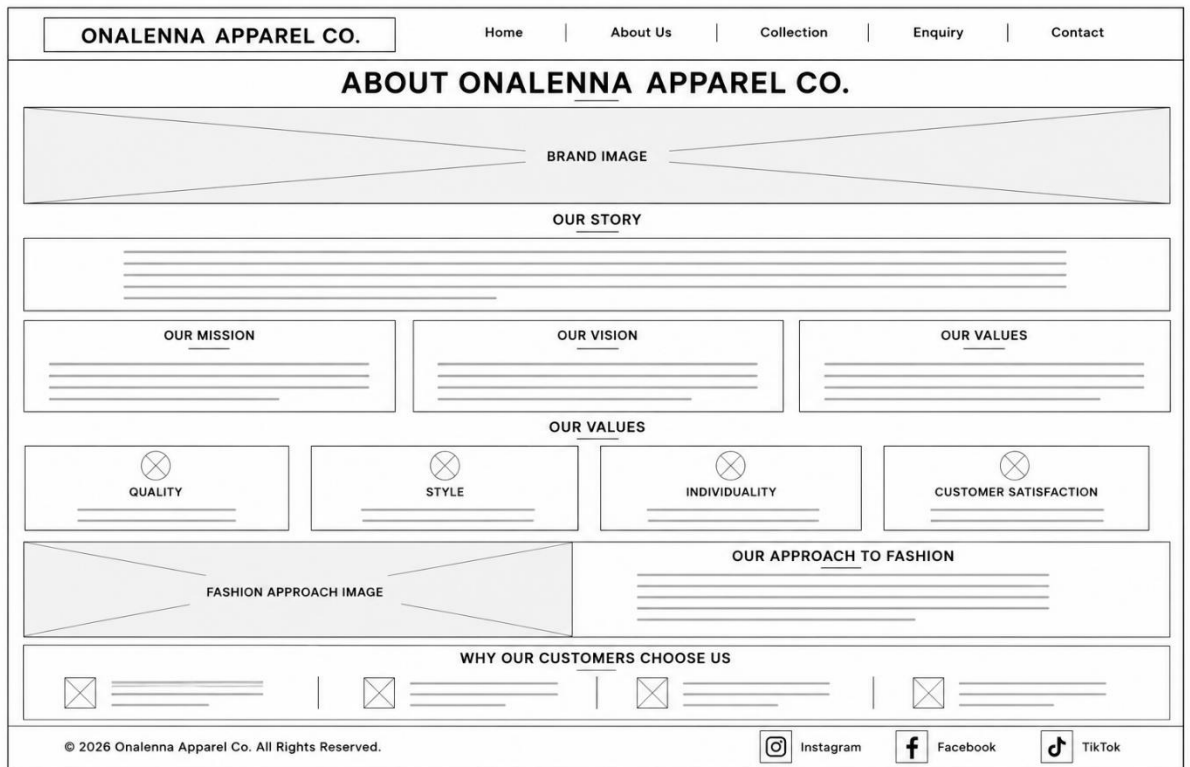

Figure 2: Low-Fidelity About Us Page Wireframe

3. Collection

The wireframes will use simple boxes, labels and placeholders to demonstrate the planned page structure and information hierarchy before final website styling is applied.

6.

Figure 6: Onalenna Apparel Co. Website Sitemap

7. Technical Requirements

The website will be developed using **HTML5, CSS and JavaScript**. A suitable code editor such as Visual Studio Code will be used during development. The project will require image assets, web hosting, a suitable domain name and a GitHub repository for version control.

The website will be tested on different browsers and screen sizes to ensure that the pages are usable on desktop and mobile devices. Images will include suitable alternative text and forms will contain appropriate labels.

8. Timeline and Milestones

Week	Activity	Deliverable
Week 1	Research and content collection	Organisation research
Week 2	Proposal, sitemap and wireframes	Planning documents
Week 3	HTML development	Five website pages

Week	Activity	Deliverable
Week 4	HTML testing and corrections	Functional website
Week 5	CSS styling	Styled website
Week 6	Responsive design	Desktop and mobile layouts
Week 7	JavaScript and validation	Interactive features
Week 8	Final testing and corrections	Completed website
Week 9	Documentation and GitHub preparation	Final submission

9. Budget

Item	Estimated Cost
Domain registration	R200 per year
Web hosting	R600 per year
Website development	R3,500 once-off
Website maintenance	R1,200 per year
Product images and digital assets	R500
Testing and deployment	R500
Estimated First-Year Total	R6,500

The budget includes the estimated cost of developing, hosting and maintaining the website. The development cost covers the creation of the five-page website, while hosting and domain costs support the website after deployment.

10. Conclusion

The proposed Onalenna Apparel Co. website will provide the clothing brand with a professional online presence where customers can discover its products, learn about the organisation and make enquiries. The website will combine clear product presentation with simple navigation and a modern fashion-focused design. The proposed structure will also provide a suitable foundation for future expansion of the business's online presence.
